

Starting a career in Cybersecurity

How to become a globally recognized cybersecurity professional.

zumaroc

Did you know?

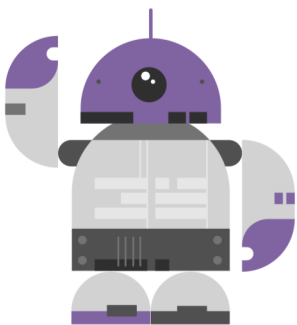

Gone are the days of simple firewalls and antivirus software being your sole security measures. Cyber threats can come at any level of your organization. So, educating your employees about simple scams like phishing, ransomware attacks or other malware designed to steal intellectual property or personal data.

Let's look at facts and statistics...

Currently, there is a shortage of 2.93 million Cyber Security professionals worldwide, according to ISC2. According to a 2016 report by the African Union Commission (AUC) and the cybersecurity firm Symantec, only 20% of African states currently have the basic legal frameworks in place for countering cybercrime. And they also lack the expertise for the job.

Bottomline...

The threat is urgent, the stakes are incredibly high and [there aren't nearly enough highly educated and qualified workers to meet the demand](#). That's why companies are paying high salaries for well-trained cybersecurity professionals — and that's also why earning a cybersecurity degree could be the best investment you ever make.

Kickstart your cybersecurity journey with our **Zumaroc Accelerator Programme**

The online security school that invest in you.

Train remotely to become a certified ethical hacker and pay no tuition until you're hired.
